ENTERPRISE ANALYTICS
Driving Asset Performance

Business Drivers

The challenge for asset-intensive organizations throughout the World is to achieve maximum return from their productive assets. This requires a relentless focus on excellence in asset management – the difficult and multi-faceted challenge of operating and maintaining complex and diverse equipment.

How an organization addresses the asset management challenge can be a key source of competitive advantage – with a 1% increase in production offers a global company the potential of a \$1 Billion increase in shareholder value.

1% increase = \$1 Billion

- Incorrect parts
- Lack of spares
- Breakdowns
- Excessive maintenance
- Uncontrolled purchases
- Plant Fatigue
- Late deliveries
- Quality problems
- Low compliance
- Supply chain Bottlenecks
- Manual Processes

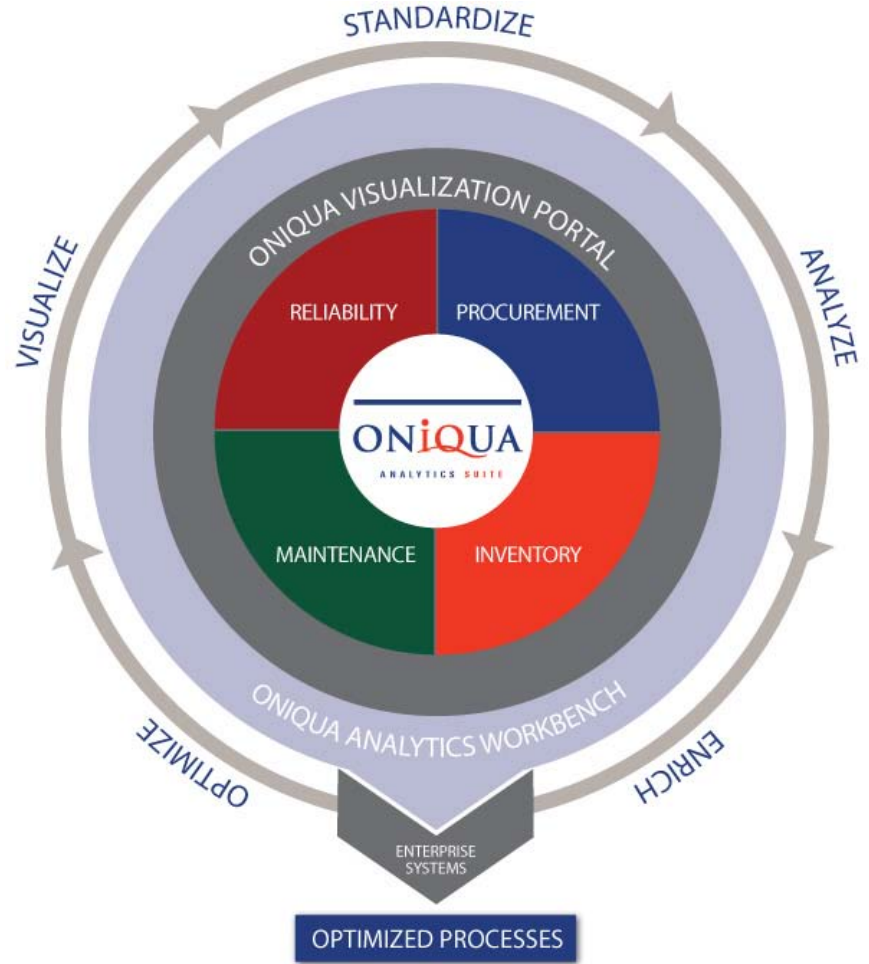

Oniqua Analytics Suite

The Oniqua Analytics Suite is the World's first advanced analytical solution designed specifically for asset-intensive organizations.

Combining reliability, maintenance, inventory and procurement analytics; the Oniqua Analytics Suite provides a holistic approach to the analysis and optimization of assets, over their entire lifecycle and across the Enterprise.

Through sophisticated visualization tools and optimization algorithms, the Oniqua Analytics Suite allows organizations to proactively analyze the huge volume of data captured by their transactional systems.

The results of this analysis are used to automatically optimize key decision parameters – providing a feedback loop that continuously drives asset performance.

“Intelligently balancing risk and costs to deliver continuous improvement in asset performance.”

Rapid Benefits Low Risk

Oniqua Analytics Suite provides organizations with visibility of the performance of their maintenance inventory and procurement operations across the Enterprise and systems.

Analyzing maintenance costs and the performance of mobile fleets and fixed plant, analysts can identify correlations between strategy and outcomes – helping the organization to quickly share best practices and achieve a consistent approach to maintenance.

Inventory analysts can slice and dice inventory data to determine stock holdings of key commodities. Executives can measure and compare inventory performance across all sites using consistent key performance indicators.

Oniqua Procurement Analytics provides a powerful tool to allow procurement professionals to spend more time actively negotiating contracts and managing relationships and less time collecting data.
